

# Free sprinkler nozzles

To help you save water, Cal Water is partnering with FreeSprinklerNozzles.com to make Toro Precision Series Spray Nozzles available at no charge to our customers.

These nozzles create a spray pattern that offers better coverage, defined edges, reduced run-off, and lower flow, which ultimately results in less waste when you water your landscaping. In fact, these nozzles can provide up to a 30% water savings compared to a less-efficient system.

Visit [www.calwater.com/nozzles](http://www.calwater.com/nozzles) to learn more about the program and request your free sprinkler nozzles.

*Projections of savings are based on comparison of Precision Series Spray Nozzles and conventional spray nozzles using the same watering schedule. Actual savings from installing Precision Spray nozzles may vary based on site conditions, head spacing, and other factors.*

Please consider the environment and recycle this paper.

## Smart irrigation controller rebate available

Cal Water offers rebates on qualified water-efficient appliances through its Conservation Rebate Program.

Smart irrigation controllers automatically adjust their watering schedule in response to changing weather conditions. The maximum available rebate is based on the number of irrigation stations:

- 12 stations or fewer: \$200
- 13-18 stations: \$300
- 19 stations or more: \$450

The controller must be Smart Water Application Technology (SWAT) tested and on the qualified product list (available on our web site). This rebate is available through December 31, 2013, or until rebate program funds are depleted, whichever comes first.

Visit [www.calwater.com/conservation](http://www.calwater.com/conservation) to download a rebate application, find qualifying devices, and learn more. If you don't have easy access to a computer, call the Rebate Program Customer Support Line at (888) 782-7457.
